DECLARATION

We hereby declare that the SRS, submitted along with the **Software Engineering (2301CS405)** for entitled “**Super Market Management**” submitted in partial fulfilment for the Semester-4 of **Bachelor Technology (B. Tech)** in **Computer Science and Engineering (CSE)** Department to Darshan University, Rajkot, is a record of the work carried out at **Darshan University, Rajkot** under the supervision of R. B. Gondaliya and that no part of any of report has been directly copied from any students’ reports, without providing due reference.

CERTIFICATE

This is to certify that the SRS on “**Super Market Management** ” has been satisfactorily prepared by **Smit Maru (23010101161)** under my guidance in the fulfillment of the course **Software Engineering (2301CS405)** work during the academic year 2024-2025.

ACKNOWLEDGEMENT

I wish to express my sincere gratitude to my project guide Prof. R. B. Gondaliya and all the faculty members for helping me through my project by giving me the necessary suggestions and advices along with their valuable co-ordination in completing this work.

I also thank my parents, friends and all the members of the family for their precious support and encouragement which they had provided in completion of my work. In addition to that, I would also like to mention the Darshan University personals who gave me the permission to use and experience the valuable resources required for the project from the University premises.

Thus, in conclusion to the above said, I once again thank the faculties and members of **Darshan University** for their valuable support in completion of the project.

Thanking You

Smit Maru

ABSTRACT

The Supermarket Management System is an advanced solution designed to streamline the operations of supermarkets while enhancing customer satisfaction. This system focuses on efficiently managing inventory, tracking sales, processing payments, and delivering products and services directly to customers' locations.

By integrating user-friendly interfaces and robust backend functionalities, the system provides real-time inventory updates, automated billing, and seamless order management. The primary objective is to minimize manual intervention, reduce operational costs, and ensure timely delivery of goods to customers.

The system also supports data analytics for better decision-making, helping businesses optimize stock levels, understand customer preferences, and improve overall efficiency. With its comprehensive design, the Supermarket Management System aims to revolutionize retail operations and provide a superior shopping experience.

The main purpose of this system is to minimize human efforts and automate supermarket operations effectively.

1 Introduction

1.1 Product perspective

This project is aimed at transforming the manual supermarket operations into an internet-based application to enhance convenience and efficiency. The system allows users to browse products, place orders, and access account details, including past purchases and delivery status.

It is a multi-user version designed to handle the core functions of a supermarket, such as inventory management, billing, order processing, and delivery tracking. The system efficiently manages cataloging, stock replenishment, sales monitoring, and customer relationship management.

This application is capable of meeting the fundamental requirements of small to medium-sized supermarkets, ensuring streamlined operations and improved customer satisfaction.

1.2 Product features

1.2.1 There are four different users who will be using this product:

- Admin acts as the administrator, overseeing the operations.
- Customer purchases products from the supermarket.
- Staff manages store operations, assists with stock updates, and manages product delivery.
- Delivery delivers orders and updates delivery status.

1.2.2 The features that are required for the Admin are:

- Admin can manage user roles and permissions to control access to various system features.
- Admin can manage the distribution of items to different sections or locations within the supermarket.
- Admin can monitor low-stock items and reorder products to maintain stock levels.
- Admin can create, edit, or remove product categories to organize inventory efficiently.
- Admin has the authority to manage and disburse salaries to staff based on roles and working hours.
- Admin can access transaction history, including sales, stock movements, and customer interactions, to track activities.
- Admin can maintain supplier details, manage contracts, and monitor supply chain operations.
- Admin can give commands or instructions to staff regarding stocking, pricing changes, or inventory updates.
- Admin can view, update, and manage details of staff members, including roles, working hours, and contact information.
- Admin can generate and view various reports, such as sales reports, inventory reports, and employee performance reports, to assess performance.
- Admin can access and view customer details, including purchase history, preferences, and contact information to improve customer service.

1.2.3 The features that are required for the Customer are:

- Customer can search for specific products by name, brand, or category.
- Customer can add products to their shopping cart for later purchase.
- Customer can create and manage an account to store personal information, payment details, and order history.
- Customer can track the status of their orders, including shipping details and delivery times.
- Customer can make purchases by selecting products, applying discounts, and proceeding to checkout.
- Customer can choose from multiple payment options such as credit/debit cards and digital wallets.
- Customer can view their purchase history for quick reordering and reference.

- Customer can access customer support for inquiries, complaints, or product-related issues.
- Customer can request the supermarket to stock new products that are not available.
- Customer can leave reviews and ratings for products they've purchased.
- Customer can update their profile information, including contact details and shipping address.

1.2.4 The features that are required for the Staff are:

- Staff can assist customers with product inquiries and purchases.
- Staff can update inventory details as products are sold or restocked.
- Staff can monitor and organize stock of perishable and non-perishable goods.
- Staff can help manage promotions, discounts, and in-store offers for customers.
- Staff can process returns and exchanges of products as per supermarket policies.
- Staff can report inventory needs or low-stock items to the Admin.
- Staff can help with packaging and organizing orders for delivery.
- Staff can manage the checkout process and assist customers during payment.
- Staff can ensure the cleanliness and proper arrangement of store shelves.
- Staff can assist in managing customer feedback and improving service quality.

1.2.5 The features that are required for the Delivery boy are:

- Delivery boy can receive and view delivery orders assigned by the Admin or Staff.
- Delivery boy can update the delivery status (e.g., "out for delivery," "delivered," "failed delivery").
- Delivery boy can verify customer identity upon delivery to ensure correct recipient.
- Delivery boy can report issues with deliveries, such as incorrect addresses or missing products.
- Delivery boy can access customer contact information for any delivery-related issues.
- Delivery boy can return undelivered products to the supermarket when necessary.
- Delivery boy can provide feedback on delivery conditions and improve efficiency.

1.3 Functional Requirement

1.3.1 Admin

- **Manage Roles and Permissions:** Admin can assign and modify user roles and permissions to control system feature access.
- **Distribute Items:** Admin can allocate items to specific sections or locations within the supermarket.
- **Monitor and Reorder Stock:** Admin can track low-stock items and reorder products to maintain inventory levels.
- **Manage Product Categories:** Admin can create, update, and delete product categories for efficient inventory organization.
- **Salary Management:** Admin can calculate and disburse salaries based on roles and working hours.
- **Transaction Monitoring:** Admin can view and analyze transaction history, including sales, stock movements, and customer interactions.
- **Supplier Management:** Admin can maintain supplier details, manage contracts, and oversee supply chain operations.
- **Issue Commands to Staff:** Admin can send instructions to staff about stock updates, pricing changes, or inventory adjustments.
- **Staff Management:** Admin can view, update, and manage staff details, such as roles, contact information, and working hours.
- **Generate Reports:** Admin can produce reports (e.g., sales, inventory, employee performance) for performance assessment.
- **Customer Details Management:** Admin can view customer details, including purchase history and preferences, for improved service.

1.3.2 Customer

- **Search Products:** Customers can search for products by name, brand, or category.

- **Shopping Cart Management:** Customers can add, update, or remove items in their shopping cart.
- **Account Management:** Customers can create and manage an account for storing personal information, payment methods, and order history.
- **Order Tracking:** Customers can track the status and shipping details of their orders.
- **Purchase Products:** Customers can select items, apply discounts, and proceed to checkout.
- **Payment Options:** Customers can choose from multiple payment methods, including credit/debit cards and digital wallets.
- **View Purchase History:** Customers can review past orders for quick reordering.
- **Customer Support:** Customers can reach out for inquiries, complaints, or product-related issues.
- **Product Requests:** Customers can request the stocking of unavailable products.
- **Reviews and Ratings:** Customers can leave feedback on purchased products.

1.3.3 Staff

- **Assist Customers:** Staff can help customers with product inquiries and purchases.
- **Update Inventory:** Staff can update inventory as items are sold or restocked.
- **Stock Monitoring:** Staff can organize and monitor perishable and non-perishable goods.
- **Promotions Management:** Staff can assist in managing in-store offers, promotions, and discounts.
- **Handle Returns:** Staff can process returns and exchanges as per supermarket policies.
- **Report Low Stock:** Staff can report inventory needs or low-stock items to the admin.
- **Order Preparation:** Staff can package and organize orders for delivery.
- **Checkout Assistance:** Staff can manage payments and assist customers during checkout.
- **Store Maintenance:** Staff can ensure cleanliness and proper arrangement of store shelves.
- **Feedback Management:** Staff can collect customer feedback to enhance service quality.

1.3.4 Delivery Boy

- **View Delivery Orders:** Delivery personnel can access assigned orders from the admin or staff.
- **Update Delivery Status:** Delivery personnel can update statuses like “out for delivery,” “delivered,” or “failed delivery.”
- **Customer Verification:** Delivery personnel can verify customer identity upon delivery.
- **Report Issues:** Delivery personnel can report issues such as incorrect addresses or missing items.
- **Contact Customers:** Delivery personnel can access customer contact information for delivery-related issues.
- **Return Undelivered Items:** Delivery personnel can return undelivered items to the supermarket.
- **Provide Feedback:** Delivery personnel can give feedback on delivery conditions to improve operations.
-

1.4 Non-Functional Requirement

1.4.1 Usability:

- The UI should be simple enough for everyone to understand and get the relevant information without any special training. Different languages can be provided based on the requirements.

1.4.2 Accuracy:

- The data stored about the books and the fines calculated should be correct, consistent, and reliable.

1.4.3 Availability:

- The System should be available for the duration when the library operates and must be recovered within an hour or less if it fails. The system should respond to the requests within two seconds or less.

1.4.4 Maintainability:

- The software should be easily maintainable and adding new features and making changes to the software must be as simple as possible. In addition to this, the software must also be portable.

Acceptance Criteria	: Given: The customer is on the product payment page

	<p>When: The customer selects the "Payment" option and customer enters an incomplete payment details and customer clicks the "Pay" button to pay order bill.</p>
--	---

	<p>Then the system displays invalid information messages for the Ordre Payment.</p>
--	--

6 Test cases

Project Name:	EMI Calculator	Test Designed by:	P. U. Jadeja
Module Name:	Login	Test Designed date:	01-10-2023
Release Version:	1.0	Test Executed by:	R. B. Gondaliya
		Test Execution date:	15-01-2023

Pre-condition: User should be registered and logged in

Test Case ID	Test Title	Test Type	Description	Test Case ID
TC_001	Login with valid credentials	Functional	Login to Supermarket system with valid credentials	TC_001
TC_002	Login with invalid credentials	Functional	Login to Supermarket system with invalid credentials	TC_002
TC_003	Search for an existing product	Functional	User searches for a product in inventory	TC_003
TC_004	Make a successful payment	Functional	User completes payment using a valid card	TC_004

Test Case Title	Login with valid credentials
Test Type	Functional
Test Priority	High
Pre-condition	User must have a registered account

Test Step	Test Case Description	Expected Result	Actual Result	Status	Comment	Data	Bug ID
1	Open the login page	Login page should load	Page loaded	Pass			
2	Enter valid username	Username is accepted	Accepted	Pass		test_user	
3	Enter valid password	Password is accepted	Accepted	Pass		*****	
4	Click login button	User is redirected to dashboard	Redirected	Pass			

Test Case Title	Search for an existing product
Test Type	Functional
Test Priority	Medium
Pre-condition	User must be logged in and products should exist in the database

SRS – Super Market Management System

Test Step	Test Case Description	Expected Result	Actual Result	Status	Comment	Data	Bug ID
1	Navigate to search page	Search page should load	Loaded	Pass			
2	Enter product name in search bar	Product should be found	Found	Pass		Milk	
3	Click search button	Product list should display	Displayed	Pass			
Test Step	Test Case Description	Expected Result	Actual Result	Status	Comment	Data	Bug ID

Test Case Title	Make a successful payment
Test Type	Functional
Test Priority	High
Pre-condition	User must have items in the cart and valid payment details

Test Step	Test Case Description	Expected Result	Actual Result	Status	Comment	Data	Bug ID
1	Proceed to checkout	Checkout page should load	Loaded	Pass			
2	Enter valid payment details	Payment details accepted	Accepted	Pass		Visa ****1234	
3	Click pay button	Payment should be successful	Successful	Pass			

Test Case Title	Check order status update
Test Type	Functional
Test Priority	Medium
Pre-condition	User must have completed a purchase

Test Step	Test Case Description	Expected Result	Actual Result	Status	Comment	Data	Bug ID
1	Go to order history	Order list should appear	Displayed	Pass	-	-	-
2	Check latest order	Status should be 'Confirmed'	Status remains 'Pending'	Fail	Delayed update	-	BUG_001
